

Hello! My name is Nikola Stanchev, iOS mobile developer and computer engineer. I am self-organising, always curious and quickly adaptable. Engineering mindset and curiosity for new technologies helped me while developing my first commercial iOS application [SwiftlyPark](#).

Experience overseeing the full app development process from architecture, development to releasing on the AppStore and overlooking feature updates is what makes me stand out as a iOS developer. I have experience with the latest and greatest Apple technologies as well as third party libraries. When it comes to design I have a sharp eye and strive for perfection. A current project I am working on is a task management app with a twist utilizing SwiftUI. I'm driven by the desire to constantly learn new things and technologies, exploring their potential uses and sharing them with the people around me. For a more detailed information about me, my projects and experience, feel free to visit my portfolio website: www.nikolastanchev.com
